Hawaya Racing Receives

DynoJet Tuning Center Certification

On December 7, 2009 Steve Vickers of Hawaya Racing attended the DynoJet Tuning Center Training in Las Vegas, Nevada. DynoJet is the leading manufacturer of dynamometers and is the creator of the Power Commander fuel injection mapping component. Upon completion of the three day training course, Hawaya Racing received their certification as a DynoJet - Power Commander Tuning Center.

Hawaya Racing plans to feature the Power Commander in our upcoming line of custom performance engine packages, which will include our CNC Ported Head and cylinder exchange program. The launch of this new program will enable Hawaya Racing to create and install custom fuel injection maps for the performance-minded Harley rider. "We have had a DynoJet Chassis Dyno for over 10 years, says Steve. The benefit of this additional training will allow us to tailor the customers bike to his riding style, whether it be all out performance or just cruising down the highway";.

For more information on the DynoJet Power Commander, call Hawaya Racing at 336-973-5078 or visit www.powercommander.com.
